

DIR-412 Optus Broadband - 3G Settings

Below is the requirements for Optus 3G Broadband:

Once you have logged into <http://192.168.0.1/> click on the "Manual Internet Connection Setup", unselect the Auto Config option and enter the configuration as per below:

The screenshot shows the D-Link DIR-412 web configuration interface in Internet Explorer. The browser address bar shows http://192.168.0.1/bsc_wan.php. The page title is "Product Page : DIR-412" and the firmware version is "1.04". The navigation menu includes "DIR-412", "SETUP", "ADVANCED", "TOOLS", "STATUS", and "SUPPORT". The "SETUP" menu is expanded to show "INTERNET", "WIRELESS SETTINGS", and "NETWORK SETTINGS". The "INTERNET" section is selected, and the "WAN" tab is active. The "3G INTERNET CONNECTION" section is visible, with the following settings:

- Auto Config : Enable
- Country : Australia
- ISP : YesOptus
- User Name : (optional)
- Password : (optional)
- Dial Number : *99#
- APN : internet (optional)
- Authentication Protocol : Auto (PAP+CHAP)
- SIM Card PIN Code : (optional)
- PIN Code Status : SIM card is unlocked.
- Reconnect Mode : Always-on Connect-on demand Manual
- Maximum Idle Time : 5 (minutes, 0=infinite)
- MTU : 1492

Buttons for "Save Settings" and "Don't Save Settings" are present at the bottom of the configuration section. A "Helpful Hints..." section on the right provides support information.

Additional APN's:

connect (PostPaid)

yesbusiness (Monthly Bill/Business related)

preconnect (PrePaid)

yesinternet

Remember once you change a configuration click on Tools > System and press the 'Reboot the Device' button. Wait for the device to reboot with the new configuration before trying to access the Web Configuration again.
